DOLPHIN INTEGRATION GETS THE EN 9100 CERTIFICATION FOR ITS SERVICE ACTIVITY OF ASIC/SOC INTEGRATION

Grenoble, March 29, 2016.

The company announces having passed the EN 9100 certification for its service activity in design and integration of specific integrated circuits, in accordance with its customers' demand, in the aeronautics and military domains. This new certification partakes naturally in a process of excellence and complements the ISO 9001 certification granted in 2008.

Dolphin Integration thus is now referenced in the database OASIS of the International Aerospace Quality Group.

This certification demonstrates the rigor of the quality control devices put in place, aiming at designing integrated circuits right on first pass, and guaranteeing the mastery of the supply chain. It constitutes a strategic step for the company, which has been active in the aeronautics market for twenty years, and which had already been selected in 2011 by the « European Defence Agency » as the privileged partner for European companies in the defense industry (for the EDA-SoC project).

Strengthened by this new certification, Dolphin Integration aims at continuing the development of its service activities for large French and European industrial companies, but also worldwide, by relying on its product offering specifically differentiating for circuits with very low power consumption.

Gilles Depeyrot, CEO

Dolphin Integration's identity

The company, created in 1985, is a technological leader, acknowledged worldwide, in the industry of design for Microelectronics with low-power consumption.
It capitalizes 30 years of R&D, protected by a score of patents and by proprietary EDA solutions, to commercialize new products, either standard or custom, for both consumer applications and sectors of industry and aeronautics.

It is headquartered in Meylan, in the Grenoble region, in Laval, Quebec and in Netanya, Israel. It counts about 200 employees, including 160 engineers and scientists. www.dolphin.fr
